

Taxonomic Study of Tribe Copiphorini in Korea (Orthoptera: Tettigoniidae: Conocephalinae)

KIM, Tae-Woo* and Jin Ill KIM

Department of Biology, Sungshin University, Seoul, 136-742, Korea

ABSTRACT Five species of the tribe Copiphorini (Orthoptera, Tettigoniidae, Conocephalinae) including a newly recorded species *Xestophrys javanicus* Redtenbacher are recognized in Korean fauna. The key to species, characteristic figures, and diagnosis for the newly recorded species are presented.

Key words : Taxonomy, Copiphorini, Conocephalinae, Tettigoniidae, Orthoptera, Korea

INTRODUCTION

The tribe Copiphorini belongs to the subfamily Conocephalinae s. lat. (Orthoptera: Tettigoniidae), which members are composed of more than 410 species throughout the world (Naskrecki and Otte, 1999). It is easily distinguished from the other Tettigoniids by markedly slanting head shape and larger sized body. According to authorship, sometimes it is treated as the state of independent subfamily Copiphorinae separated from Conocephalinae in the Tettigoniidae (Karny, 1912).

Some reports dealt with Korean Copiphorini accomplished by Mori (1933), Cho (1959, 1969), and Lee (1990), but only as a part of Orthoptera list. Therefore, there was no comprehensive study for members of Copiphorini in Korea up to now.

In this study, five species of the Copiphorines are recognized in Korean fauna: *Euconocephalus nasutus* (Thunberg), *Ruspolia lineosa* (Walker), *Ruspolia jezoensis* (Matsumura et Shiraki), *Pseudorhynchus japonicus* Shiraki, and including a newly recorded species *Xestophrys javanicus* Redtenbacher. The key to known Korean Copiphorini species, diagnosis for the newly recorded species, and comparative figures of stridulatory apparatus are presented.

The depositories and the provinces of Korea are given in abbreviated form as follows: EU - Ehwa

Women's Univ.; GSU - Gyeongsang Univ.; KU - Korea Univ.; NIAST - National Institute of Agricultural Science and Technology; SSU - Sungshin Women's Univ.; SWU - Seoul Women's Univ.; YNU - Yeongnam Univ.; GW - Gangwon-do; GG - Gyeonggi-do; CB - Chungcheongbuk-do; CN - Chungcheongnam-do; GB - Gyeongsangbuk-do; GN - Gyeongsangnam-do; JB - Jeollabuk-do; JN - Jeollanam-do; JJ - Jeju-do.

SYSTEMATIC ACCOUNT

Tribe Copiphorini Karny

Key to known species of Korean Copiphorini

1. Body relatively longer and slender; Hind femora nearly three times longer than mid femora; Male cerci cylindrical with perpendicular bending inwardly 2
- Body relatively stouter and robuster; Hind femora barely two times longer than mid femora; Male cerci broaden and flattened with developed basal processes 4
2. Fastigium of vertex with conical pointed apex; Notch clearly opened between fastigia of vertex and frons *Euconocephalus nasutus* (Thunberg)
- Fastigium of vertex with obtusely blunted apex; Notch seldom opened between fastigia of vertex and frons 3
3. Dorsal width of fastigium of vertex 2.0 times as wide as antennal scape; Each sides of fore, mid tibiae dark black; Tegminal tip rather obliquely

* To whom correspondence should be addressed.

E-mail: pulmuchi@sungshin.ac.kr, Tel: 82-2-920-7173

- truncated *Ruspolia lineosa* (Walker)
 - Dorsal width of fastigium of vertex 1.5 times as wide as antennal scape; Fore, mid tibiae concolorous with femora; Tegminal tip rather roundly acute
 *Ruspolia jezoensis* (Matsumura et Shiraki)
 4. Body relatively smaller; Notch closed between fastigia of vertex and frons; Fastigium of vertex without ventral tubercle
 *Xestophrys javanicus* Redtenbacher
 - Body relatively larger; Notch markedly opened between fastigia of vertex and frons; Fastigium of vertex with ventral tubercle basally
 *Pseudorhynchus japonicus* Shiraki

Genus *Euconocephalus* Karny

Type species: *Locusta acuminata* Fabricius.

1. *Euconocephalus nasutus* (Thunberg)

좁매부리 (Fig. 1)

Conocephalus nasutus Thunberg, 1815. Mem. Acad. St. Petersb. 5: 273, China.

= *Locusta acuminata* Fabricius, 1793. Ent. Syst. 2: 39. [synonymy by Kevan and Knipper, 1955]

? = *Conocephalus varius* Walker, 1869. Cat. Derm. Salt. Brit. Mus. 2: 320, China, Hong Kong, Silhet.

Euconocephalus acuminatus: Mori, 1933: 55; Cho, 1959: 161, fig. 31; Cho, 1969: 756, pl. 51; Ju, 1969: 17.

Euconocephalus nasutus: Bey-Bienko, 1955: 1263, Korea.

Euconocephalus thunbergi: Kim and Oh, 1990: 120; Kim and Oh, 1991: 149; Paik et al. 1995: 294. [synonymy of *Euconocephalus varius* by Hebard, 1922].

Material examined. GN- 1 ♂, Deokho-ri Haimyeon Goseong, 30-31 X 1996, Kang (GSU); 1 ♂, Mt. Sanseongsan Yongtae-ri Hail-myeon Goseong, 29-30 VI 1998 (GSU); 1 ♂, Sincheon Sicheon Sancheong, 12-13 X 1996, Kim (GSU); 1 ♀, Light trap, Hansan Tongyeong, 6-7 VII 1994, Goh (GSU). JJ- 1 ♀, Seungeup Namjeju, 3 IX 1994, Lee (S.M. Lee's collection); 1 ♀, Jeju, 2 V 1992, LHJ; 1 ♀, Seonhle, 28 IX 2000, Kim (NIAST); 1 ♂, Yongsu-ri Hangyeong-myeon Hanrim, 26 IX 2000, An (NIAST); 3 ♂ 1 ♀, Jeongbang waterfall Dongheung-dong Seoguipo, 9 VII 2002, Kim (SSU); 1 ♀, Cheonwangsa Temple Jeju, 10 VII 2002, Kim (SSU).

Distribution. Korea (Southern part), Japan, China, Philippine.

Remarks. According to Bey-Bienko (1955), still using the name, *Euconocephalus varius* (Walker) is needed a reconsideration for the synonymy of *E. nasutus* (Thunberg).

Even though the criterion is questionable (Hebard, 1922), the little difference is marginal coloration of tegmina between the two, and all Korean samples have the color in accordance with *E. nasutus*. This species overwinters in southern part of Korea as the adult stage likely as in Japan (Ito et al., 1996).

Genus *Ruspolia* Schulthess-Schindler

Type species: *Ruspolia pygmaea* Schulthess.

2. *Ruspolia lineosa* (Walker) 매부리 (Fig. 2)

Conocephalus lineosus Walker, 1869. Cat. Derm. Salt. Brit. Mus. 2: 318, China.

Homoeocoryphus [sic] *lineosus*: Doi, 1932: 37; Cho, 1963: 163.

Homorocoryphus lineosus: Mori, 1933: 55; Cho, 1959: 160, fig. 29; Cho, 1969: 755, pl. 50; Ju, 1969: 18.

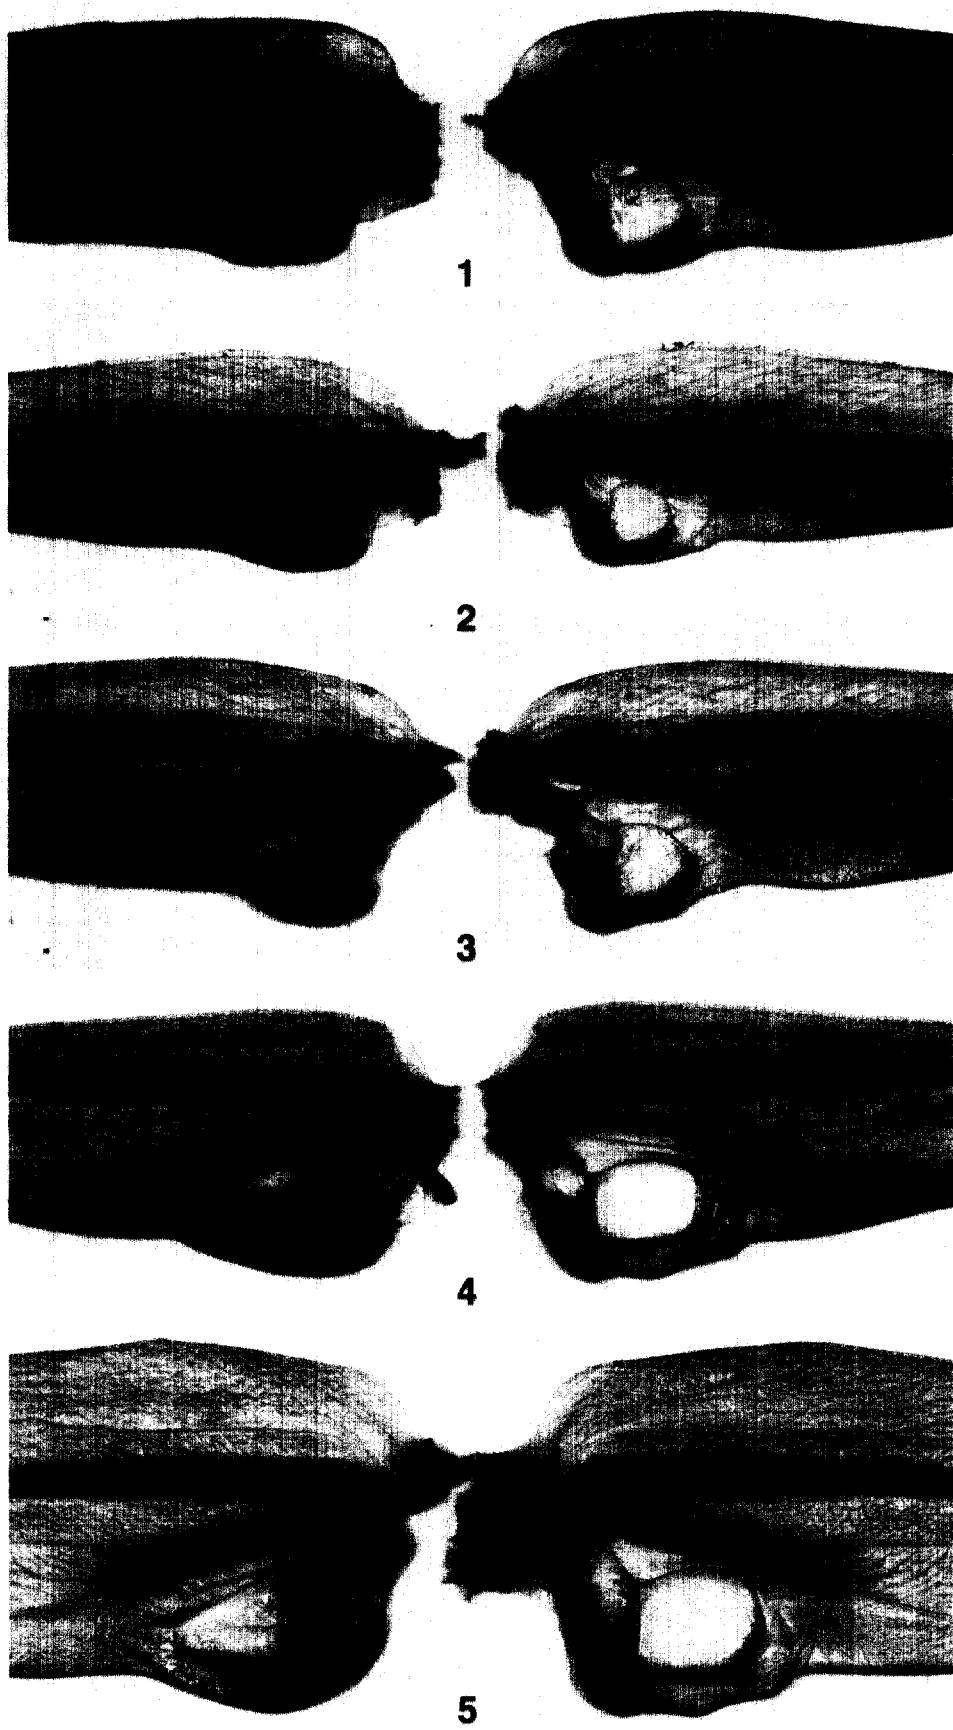

Homorocoryphus nitidulus: Lee, 1990: 109; Paik et al. 1995: 294. [misidentification]

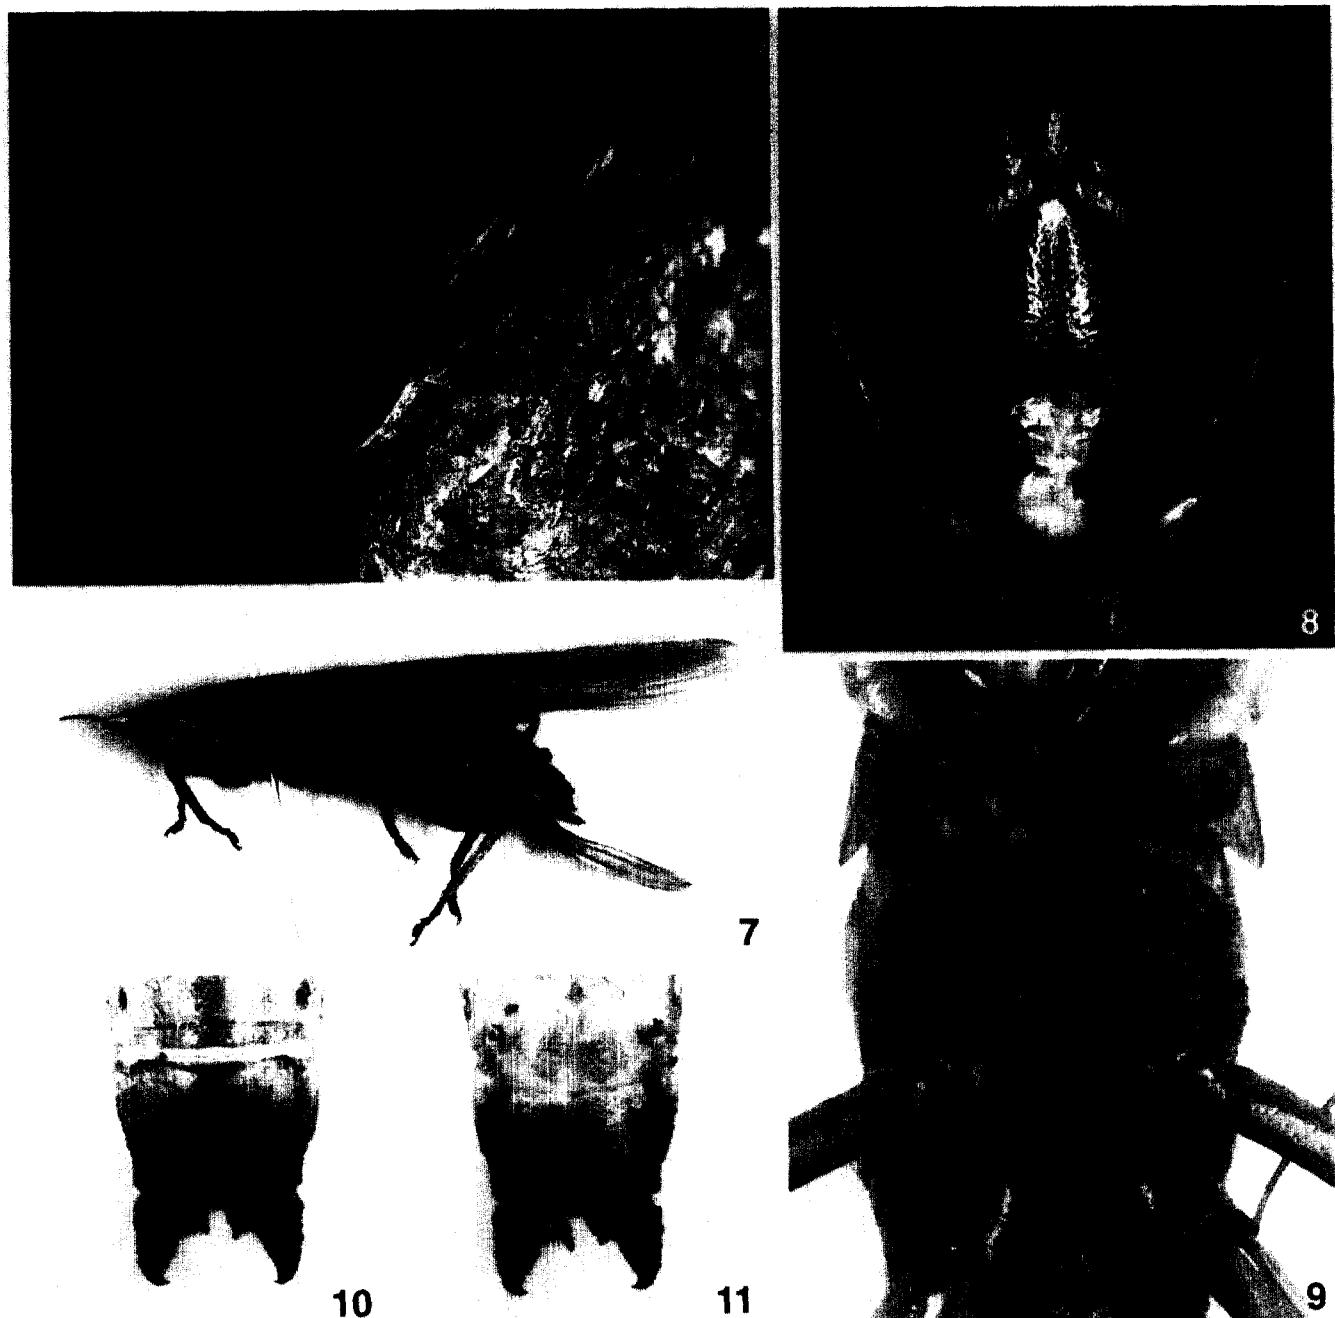

Ruspolia lineosa: Moon and Yoon, 1993: 57; Kwon and Huh, 1994: 49; Kwon et al. 1996: 104.

Material examined. GW- 1 ♀, Jukhyeon-dong Gangneumg, 29 VII 1997, Kim (SSU); 1 ♂ 1 ♀, Changwon-ri Yeongwol, 7 IX 1998, Kim (NIAST); 1 ♀, Misan Inje, 17 VIII 1960, Son (EU); 1 ♀, Deokgeori Jangpyeong, 10 X 1988, Jeon (SSU); 2 ♂ 1 ♀, Balsa-ri Chuncheon, 28 VIII 1998, Park (NIAST); 1 ♀, Noil-myeon Hongcheon, 18 IX 1993, Kim (SSU); 1 ♀, Mt. Odaesan, 3 X 1996, Kim (SSU). GG- 1 ♀, Gapyeong, 19 IX 1970, Cho (EU); 1 ♀, Mt. Baegunsan Baekjeon Hamyang, 22-23 VIII 1990, Ku (GSU). JB- 1♂, Mt. Unjangsan Jeongcheon Jinan, 5 IX 1998, Park (GSU); JN- 1♂, Dosa-ri Daap-myeon Gwangyang, 27-28 VII 1998, Park (GSU); 1♂, Jin-ri Daeheuksando, 12 VIII 1981, Lee (S.M. Lee's collection); 1♀, Chundong-ri Miam-myeon Yeongam 30 VIII 1995, (SWU).

Remark. This species seems to show rather variable characters, particularly in the discussion for larger sized populations, i.e. the names, *Ruspolia dubia* or *R. sp.* were suggested by Inoue (1989). However, it were looked upon as conspecifics with *R. jezoensis* by Fukuhara (1983), and the synonymy for those would be considered (pers. comm. from A. Ichikawa).

Distribution. Korea, Japan.

Genus *Xestophrys* Redtenbacher

Type species: *Xestophrys javanicus* Redtenbacher.

4. *Xestophrys javanicus* Redtenbacher

꼬마여치배짱이 (신청) (Figs. 4, 6-11)

Xestophrys javanicus Redtenbacher, 1891. Verh. Zool.-bot. Ges. Wien, 41: 362, fig. 16, Java.

Diagnosis. Length of body with tegmen 43-50 mm. Brown, macropterous. Fastigium of vertex with somewhat blunted apex. Notch closed between fastigia of vertex and frons. Hind femur as long as rarely two times of fore femur. Around of mouthpart, mandibles, meso-, metasternal lobes, and pleura dark black (Figs. 8, 9). Male cercus thick and conical with apex inwardly curved; basal process well developed and upwardly curved with

smooth apex (Fig. 10). Subgenital plate rather concave with short styli, not projected than cerci (Fig. 11). Female ovipositor slightly shorter than hind femora, rather widened apically (Fig. 7).

Material examined. JB- 1♂, Byeonsanbando Buan, 23 V 2001, Kim et al. (NIAST). JN- 1♀, Mt. Duryunsan Yeongam, 22 VI 1993, KBH (KU); 7♂ 2♀, Mt. Wolchulsan Yeongam, 14 V 2000, Kim (NIAST). JJ- 1♀, Jeju, 27 III 1983, Lee (S.M. Lee's collection); 1♂, Yongsu-ri Hangyeong-myeon Hanrim, 1 VI 2000, Kim (NIAST).

Remarks. This species overwinters in southern part of Korea as in the adult stage likely as in Japan (Ito et al., 1996). Sharp calling stridulation from adults at tree-top or near grass fields was observed during spring to early summer (Fig. 6).

Distribution. Korea (new record), Japan, Indonesia, Philippines.

Genus *Pseudorhynchus* Audinet-Serville

Type species: *Pseudorhynchus sicarius* Audinet-Serville.

5. *Pseudorhynchus japonicus* Shiraki

여치배짱이 (Fig. 5)

Pseudorhynchus japonicus Shiraki, 1930. Trans. Nat. Hist. Soc. Formosa, 20: 341, Japan.

Pseudorhynchus japonicus: Doi, 1934: 124; Doi, 1935: 58; Cho, 1959: 160, fig. 28; Cho, 1969: 755, pl. 50; Ju, 1969: 19; Moon and Yoon, 1993: 57; Kwon and Huh, 1994: 49; Kwon et al. 1996: 104.

Pseudorhynchus concisus: Lee, 1990: 109; Paik et al. 1995: 294. [misidentification]

Material examined. GN- 2♀, Okgye Chilcheon-do Geoje, 15–18 VIII 1985, Jeon et al. (GSU); 1♀, juvenile, 5 VIII 1999, Park (GSU); 1♂, Geompo Goseong, 9 VIII 1996, Kim (GSU); 1♀, Busan, 1 VIII 2001, Paik (NIAST). JN- 1♀, Yulpo-ri Gemdang-myeon Wando, 5 VIII 2000, Lee (NIAST).

Distribution. Korea, Japan.

ACKNOWLEDGEMENTS

Authors thank to the laboratory members of GSU, KU, NIAST, SWU, YNU and Messrs. N. Inoue, A. Ichikawa, H. Ishikawa in Japan for their kind assistances in many aspects.
